Re: IceCold

May 27, 2012

Dear Ben;

I had the privilege of using IceCold (synthetic refrigeration catalyst technology), which was able to fulfill all my expectations as a consumer. The attached billing statements serve as the main proof that this product is working perfectly for me.

Please check the attachment of the DWP bill from my business, dated 5/23/2012. The attachment, marked as B, is from last year, April, 2011, the electricity cost for my building was \$1,680.66, and the KWH was 10.960. The new bill (after injecting Ice COLD) is from April 2012, my electricity as you can see is \$1,380.10, the KWH is 8,640 in which shows a total savings of \$300.58 per month equivalent to 18% saving.

Now my saving is \$300.58 per month. The payback for my investment will be in 3 1/2 months. Also my compressors are running like new, my place is freezing cold and I understand that since the compressors are running 18% less; the life of the compressors will be extended for at least 18% longer.

With such good results that I was able to get from it, I developed the courage to strongly recommend it to others to achieve the same results that I got.

Very truly yours,

Yorn Kester
