6475 E Pacific Coast Hwy, #103
Long Beach, CA 90803

Dear George,

On behalf of the West Hills Community College District, I would like to thank you for the improvements that IceCOLD® technology has provided to the HVAC equipment on the facilities at three of our campuses to date.

The West Hills Community College District began testing the performance of IceCOLD® in June of 2012. We initially achieved efficiency gains from 19% to 22% and have continued to receive positive results over the past three plus years.

Full installations have been completed at West Hills College Coalinga; West Hills College Lemoore; and the North District Center, Firebaugh. Our plans are to continue with further installations in the near future. The West Hills Community College District is doing its part to be environmentally responsible and IceCOLD® is helping us achieve this important goal. IceCOLD® has proven to be a cost effective solution for managing our energy consumption and helping to improve the comfort level within our facilities.

I am pleased to share the positive results and experience that our district has had with the IceCOLD® team, and would like to encourage others to use IceCOLD® in their energy management plans.

Sincerely,

Frank Gornick
Chancellor
